APC SWDCO10RCAP-DIGI software license/upgrade 1 license(s)

Model: SWDCO10RCAP-DIGI

Manufacturer: APC

Product Code: 289976

R61,836

Protection

Password security

User-selectable password with strong password rules and reset password mechanism.

Multi-user access

Enables several users to carry out work on the application simultaneously and merging changes from different users seamlessly.

Read-only Access

Share access without risking unauthorized configuration changes.

User roles

Enable location and feature-based access through multi-user login and individual levels of user roles.

Convenience

Grid-based references

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
shop.cssi.co.za | sales@cssi.co.za | +27 (11)541-9950

Flexible approach to floor coordinates enabling data center operators to adopt a customized location identification scheme.

CAD integration

Enables import of Computer Aided Design (CAD) drawings in order to quickly reshape the room and convert CAD cage drawings into the DCIM model, including toggle CAD layers to show all available facility information.

Recommended Actions

Intelligent alarm descriptions coupled with recommended resolutions reduces the need for training and mean time to repair.

Manageability

Global asset search

Quickly locate assets through free text search, and export equipment data to excel format.

Multiple rooms

Provides the option to display multiple rooms on the same floor plan to accurately depict and navigate large facilities.

Organizational view

Provides location-based drill-down for a logical model of the data center, where data center rooms can be organized under regions, countries, campus, sites, buildings and rooms.

Rack front view

Detailed rack front view provides an accurate graphical representation of equipment and its location in the rack.

Asset library

Utilize the extensive catalog of physical infrastructure and IT devices from leading vendors.

Custom devices

Quickly customize library assets to your specifications in just 2 clicks, amending custom properties such as power requirements and MAC address etc.

Customizable view

Flexible application layout through drag and drop to suit the individual needs of the users.

Floor layout view

View an accurate representation of your data center through the easy-to-use graphical floor layout and 3D view.

Virtual store room

Keep track of new devices from arrival on site in the virtual store room, as best practices recomm

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Agility

Localization

User interface available in major local languages; English, French, German, Spanish, Russian, Traditional Chinese, Simplified Chinese, Japanese, Korean, Brazilian Portuguese & Italian.

Electrical room support

Monitor capacity and plan changes for centralized power equipment in areas outside of the main data center floor plan.

Shared data model

Ensure mature and synchronized data throughout the entire data center life cycle.

Optional deployment services

Ensure speedy deployment through the use of Schneider Electric Professional Services.

Vendor neutral

Allows for modeling equipment and data from any vendor, providing support for existing data center environments.

Availability

Blade server support

Mirror the exact data center setup, by modeling blades within their blade enclosures.

PUE/DCiE calculator

Provides Power Usage Effectiveness (PUE) or Data Center infrastructure Efficiency (DCiE) value for information on daily utilization of energy.

Alarms within physical layout

Provides real-time device failures within floor layout and rack front view for live status of data center operations.

Guided network management

An overview of the data center network paths and their interconnections, provided through guided input for reduction of human error.

Enterprise platform

High availability with failover redundancy through a clustered setup and load balancing, ensuring a mission critical system with no single point of failure.

Mobile data center operations

Integrates with StruxureWare Data Center Operation: Mobile for access to the StruxureWare Data Center Operation application on the go via the Motorola MC75 handheld PDA.

Live dashboard

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

shop.cssi.co.za | sales@cssi.co.za | +27 (11)541-9950

Gain transparency to data center key performance indicators through easily configured web dashboards, displaying customizable management-level information.

Inventory report

Includes structured information on all rack-mount devices, organized by device type, age, manufacturer and properties for quick overview of all current devices within a data center.

Inventory management

Shows device data within the physical layout for instant access to device details and asset attributes, and overview of data center operations.

Co-location

Cage visualization

Visualize current available space with anonymous tenant data during the pre-sales phase for planning potential new customer cages, reserving space and supporting the sales process.

Audit trail

Track all cage and facility equipment changes over the data center lifecycle, ensuring transparency and easy identification of maintenance requirements.

3D cage view

Outline cage perimeters for an instant 3D visualization of the layout, as well as an automatic calculation of the cage area.

Measured cage power

Enabling detailed charge back to individual tenants through an easy overview of sold and measured power.

Power report

Outlines the total capacity vs. the sold capacity and measured load per site for a complete overview of current power capacities.

Power receptacle report

Highlights the current status of plugs and sockets for one or more PDUs or tenants, including an indication of oversubscription.

Tenant impact analysis

Map tenant assets on a room, cage, rack or server level for an in-depth understanding of tenant impact in the event of an outage.

Space report

Instant overview of current space capacities, identifying the sellable, occupied and reserved space, as well as space identified as used internally.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

shop.cssi.co.za | sales@cssi.co.za | +27 (11)541-9950

Web Client

Allows user visibility into data center assets, power usage and power capacity via any modern web browser. This lowers maintenance costs and empowers managers to make better and more informed real-time decisions.

Tenant inventory report

Shows all equipment associated with one tenant, for an instant tenant inventory.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
