TEY41

The TEY41 slot-in PC delivers maximum performance to your BenQ Board. The Intel 12th Gen Core processor allows you to run Windows by itself or alongside the BenQ Boards Android system, giving you the power of two operating systems.

Same Windows, bigger frame

Teach with Windows on a larger, more collaborative screen. The TEY41 turns your BenQ Board into a powerful Windows device, giving you all the features and functionalities you're familiar with, but with a lot of space. You can start classes without a laptop.

Two is better than one

Use the TEY41 with the display's Duo OS mode to pair the built-in EZWrite whiteboard with a fully functional Windows system. This lets teachers simultaneously load and use Windows-based files and apps for more flexible lessons.

Remote lessons at your fingertips

The TEY41 allows schools to install and use their preferred video conferencing and hybrid learning apps. Teachers can easily load them on their BenQ Board and instantly start hosting remote classes.

Enhanced performance with vPro

The Intel vPro chip is designed to meet the needs of the modern classroom, delivering enhanced faster processing times, hardware-based security features, and advanced remote management capabilities.

Optimal data security for Windows

Get an additional layer of protection against security threats. The TEY41 comes equipped with a TPM 2.0 chip that ensures stronger encryption on Windows systems and safeguards login credentials and lesson files from compromise.
