Wave Controller is your cloud-based remote management platform allowing you to manage and control your fleet of Philips professional displays – remotely, securely and sustainably.

An essential application for your daily workflow:

- Manages your displays proactively and remotely from one central location
- Works with different display hardware and generations so you can focus on innovation and not compatibility
- Reduces the need for costly truck rolls and onsite display interventions
- Enables proactive servicing of displays without interruptions or travelling to site
- Allows you to scale integrations with a cloud native solution
- Controls costs, eliminating the need to debug and maintain displays onsite
- Enhances sustainability, reducing the need for additional hardware and travelling to site

Why Wave Controller?

Global vision

Manage your fleet of displays, wherever they are, from wherever you are

Sustainability in action

Remotely control power scheduling and settings

Open to technology

An evolutionary way to remotely manage, control and monitor your fleet in a sustainable way

Address your day-to-day integration challenges

- Sending service technicians onsite is costly
- Displays are often not easily accessible
- Interruptions of service are a lost opportunity
- Sustainability is more than just a nice to have

Sustainability in action

Truck rolls mean unnecessary travel, using resources and increasing CO2 emissions
