This DisplayPort KVM Switch enables users to switch between two desktops equipped with USB-A and DisplayPort. It allows sharing of a 4K 60Hz DisplayPort monitor, a keyboard, mouse, two USB 5Gbps devices, a stereo audio output device, and two additional USB 2.0 devices.

EDID Control for Display Compatibility

The P2AD122-KVM-SWITCH ensures a frictionless switching experience with 4K 60Hz clarity and HDCP-protected content playback. Advanced EDID management and emulation maintain monitor settings across sources, preventing resolution drops, desktop reshuffling, or blank screens when switching. IT teams save time troubleshooting display mismatches, while end-users enjoy uninterrupted workflows for CAD, content creation, and high-end editing.

Customizable Switching

This universal KVM switch offers hotkey and push-button switching. Hotkeys allow independent switching of audio and video, enabling audio playback from one computer while controlling another. An audible buzzer confirms hotkey inputs, and LEDs provide visual status feedback for the selected host.

No Drivers or Software Required

The TAA-compliant KVM Switch offers universal compatibility and works with all operating systems, including Windows, macOS, ChromeOS, and Linux. The KVM provides BIOS/UEFI control and is compatible with all hardware platforms, including Intel, AMD, and Apple Silicon (M-Series).

Reliable Performance

The rugged metal case helps prevent electromagnetic interference (EMI). 4kV Air/4kV Contact ESD protection enhances the reliability and longevity of the KVM. The included set of rubber feet protect the work surface from scratches and keep KVM in place during operation.
