Shuttle All-In-One Barebone P90U, 19.5" Multi-Touch-Screen, Celeron 3865U, Wifi, IP54, fanless, 24/7 permanent operation

Model: P90U WHITE

Manufacturer: SHUTTLE

EAN: 887993001890

Product Code: 1051952

R10,914

19.5" All-in-One PC for POS, POI and Kiosk Applications

With the XPC all-in-one P90U Shuttle expands its product range of All-in-One PCs and introduces its largest model so far. It is the first one in a 19.5 inch format and with a capacitive touchscreen. An

Intel Ultra-Low-Voltage (ULV) processor makes for high computing power while it keeps energy consumption at a low level. Thanks to its passive cooling, the system is virtually noiseless, maintenance-free and approved for 24/7 nonstop operation. Particularly suitable for vertical applications is the arrangement of connectors at the bottom and the IP54 compliant front panel which is dust-protected and protected from splashing of water.

Fanless and whisper-quiet

The fanless technology used in this PC means it is incredibly quiet. Doing away with these mechanical components also reduces the number of wearing parts, making the machine more durable and stable.

Suitable for constant operation

Work 24 hours a day, 7 days a week. As it does not use any moving parts, such as a fan, this Mini-PC is approved for constant operation. This means lower maintenance costs and a longer lifespan.

Low energy consumption

Thrift is a virtue. In terms of power consumption this Mini-PC sets an example. It is not just good for the environment but for your pocket, too.

Multiformat card reader

At last – no more searching for missing digital camera leads. Simply insert the memory card and you can access all stored photos and videos immediately.

Anti-theft protection

The Kensington Lock forms part of the anti-theft system. As with many other Notebooks, this Mini-PC can also be safely locked, ensuring long-term enjoyment from your Shuttle product.

Utilising mobile technology

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

An array of components from mobile devices are put to use in this Mini-PC. You can tell straight away by how quiet it is. The energy-saving technologies of the components used generate minimal heat, therefore additional fans are not required. The energy you save will soon be reflected in your electricity bills in the medium to long term.

Suitable for Linux operating systems

This model was successfully tested with openSUSE Linux by Novell. All machine functions worked without problem immediately after installation.

Connections without all those annoying cables

Data is transferred by WLAN completely without cables. Accessing the Internet and local network resources (e.g. printers) is now child's play when within range of an access point/hotspot.

Keeping in touch

The revolutionary touchscreen allows this Mini-PC to be controlled without the use of mouse or keyboard. Touching the screen with a finger or stylus takes the place of the mouse. And with a virtual keyboard, entries can be made directly on the screen.

Securely attached

The practical VESA mounting surface on the back of the device enables it to be attached to monitor arms or wall mounts. The VESA format is standardised, making it suitable for most mounts.

Integrated Webcam

The inbuilt Webcam enables problem-free video telephony and video conferencing in high-quality megapixel format.

Fan-less external power supply

A highly effective external power supply provides the Shuttle Mini-PC with its energy. And since it works without a fan, it is completely noise-free.

Communication in the fast lane

The integrated gigabit LAN chipset opens up completely new possibilities for communication with no restriction on the speed of data transfer. Say goodbye to information bottlenecks, whether in the company network or for home Internet access.

The fastest connection to external peripheral devices available to date

The USB 3.0 connectors of this model allow for data transfer of up to 5 Gbit/s (625 MB/s). This enables external devices such as USB hard disks to be connected and run at nearly the same speed as their internal siblings. USB 3.0 is downward compatible so that also devices of previous USB generations can be hooked up.

Just 2.5" HDDs

An extremely compact PC housing offers less space for drives, that's why this Mini-PC uses slimline 2.5-inch hard disks. The advantage of this is that there's less noise, less heat generated and reduced power consumption. However small hard disks in a small housing does not have to mean less memory. Modern 2.5" HDDs are every bit as good as their 3.5" brothers.

You can rely on SSD

This is where an energy-saving "Solid State Drive" should be used. This drive technology guarantees extremely short access times, the highest data transmission rates and considerably lower energy consumption compared to conventional hard disks. SSDs have no mechanical components at all, are therefore subject to less wear and tear and consequently benefit from a longer service life.

HDMI interface

Goodbye cable spaghetti! Modern flat-screen TVs and large-format TFT screens can be connected to this Mini-PC with just a single thin cable. Often the audio output is also transferred in brilliant quality via the HDMI cable.

Intel chipset inside

Play it safe with the reliable chipsets from the world's largest chip manufacturer. Intel chipsets have proven themselves over many years, have been presented with awards by the trade press and offer the best possible degree of compatibility.

The interface for the fastest of memory media

Internal drives to be used inside this Mini-PC can transfer data at a speed of up to 6 Gbit/s. Hard drives thus run significantly faster and brand-new media technologies such as SSDs can use their full potential. Be sure to look for SATA 6 Gbit/s.
