Streamline complex workflows by managing up to four DisplayPort computers from a single keyboard, mouse, and display. With support for true 4K 60 Hz (4:4:4) resolution, this multiview KVM delivers crisp text and precise visuals across Windows, macOS, and Linux workstations.

## Multiview Monitoring

Maintain full awareness and react faster by viewing multiple systems at once. Flexible display modes including Quad-View, Picture-in-Picture (PiP), and Picture-by-Picture (PbP) let you monitor and compare the four sources.

## Instant Switching With Continuous Video

Move seamlessly between systems using mouse roaming with zero latency and no screen blackout. Continuous video output keeps every system visible at all times, eliminating delays caused by switching or waiting for auto-scan cycles, reducing disruption in control rooms, industrial environments, and other time-sensitive operations.

## Switch Your Way

Adapt the KVM to your environment with multiple switching methods. Use front-panel buttons, keyboard hotkeys, mouse roaming, mouse side buttons, or serial control via RJ-11 or USB-C to support hands-on use, remote management, or automated workflows.

## Built-In Dual Display Output

Mirror the KVM output to two displays simultaneously using DisplayPort and HDMI. Use a local desktop monitor for hands-on control while displaying the same view on a larger wall-mounted TV for monitoring or team visibility. This dual console output improves visibility, collaboration, and redundancy without requiring external splitters or additional hardware.
