

Goodram GR00O5- 64L52S/16G memory module

Model: GR00O5-64L52S/32GDC

Manufacturer: GOODRAM

EAN: 5908267913857

Product Code: 1184160

R25,365

Goodram DDR5 CUDIMM is a modern RAM module designed for maximum performance and reliability. It ensures smooth system operation, faster application startup, and stability even under heavy workloads. The integrated PMIC provides precise power management, while the low 1.1 V voltage results in reduced power consumption. Manufactured and tested in Poland, the Goodram DDR5 CUDIMM combines cutting-edge technology with proven quality and a lifetime warranty.

More power and smooth performance

Boost your computer's performance and work without limits — even with multiple demanding applications running at once. Enjoy smoother operation, faster program loading, and a more responsive system with Goodram DDR5 CUDIMM.

The new generation of DDR5 technology

Goodram DDR5 CUDIMM modules are designed for users who demand the highest levels of stability and performance — from everyday office tasks to gaming, graphic design, and video editing.

Precision power management and stability

The latest DDR5 memory generation delivers higher data transfer speeds compared to DDR4, as well as enhanced stability under heavy system load. The integrated PMIC (Power Management IC) and signal synchronization circuitry ensure precise communication between the memory module and the processor, resulting in reliable performance even during long rendering sessions or AI computations.

Proven quality

A low operating voltage of 1.1 V means lower energy consumption without compromising high performance. As with all Goodram DRAM modules, these are manufactured and 100% tested in Poland. The lifetime warranty guarantees long-term reliability and peace of mind.
