Meet the leading AMD Ryzen™ Threadripper™ PRO-powered workstation. With all its power, speed, and performance, the Lenovo ThinkStation P8 breezes through labor-intensive workflows and high-end applications, including AR/VR, AI modeling, and data science. Packed with state-of-the-art cooling, storage, and memory it boasts an iconic modular Aston Martin-inspired chassis that lets you swap components and expand this beast of a machine with ease.

The performance you need, when you need it

When it comes to Aston Martin, the iconic luxury British sports car manufacturer, and ThinkStation there are two key qualities that they share. Namely, high performance and ergonomic design - both of which you'll find on the ThinkStation P8. With its tool-less chassis, as well as front-drive access and hot-swap drives, this modular workstation is a breeze to customize and upgrade. What's more, the CPU cores and memory are scalable based on your workload needs - with multiple options for power supply and storage capacity.

A true force to be reckoned with

Whether it's on a desk or in the data center, the scalable rack-optimized ThinkStation P8 workstation packs a punch. For starters, it has the most cores in a single-socket workstation (up to a staggering 96). It boasts a breakthrough computer architecture with enhanced cooling and acoustics to maximize and streamline performance. It also supports up to three NVIDIA RTX™ graphics cards for unprecedented heavy-duty graphics, 3D rendering, game development, and more.

Durable, reliable, & sustainable

Each ThinkStation P8 undergoes stringent Lenovo tests to ensure it delivers maximum uptime, essential for mission-critical environments. A host of independent software vendors (ISVs)* also assess it to check that it can zip through compute-intensive, multithreaded tasks. It also comes with a number of energy efficiency and sustainable registrations and certifications, including EPEAT® Gold and TCO 9.0. What's more, its packaging is composed of recycled, biobased, and/or sustainably forested content.

Taking the guesswork out of security

At the heart of every ThinkStation P8 lies ThinkShield—a suite of essential hardware and software security solutions that work together to safeguard your workstation and your data. It includes the Trusted Platform Module (TPM) to encrypt your passwords and data. Smart USB protection prevents unauthorized access to the USB ports, of which the P8 has many. It also has a self-healing BIOS feature should the system becomes corrupt or is maliciously attacked. And there's a Kensington Security Slot™ to physically secure the PC.

Specifications may vary depending upon region / model.
