The multi-purpose AI powerhouse: desktop performance & elite signage in 1.3 litres

The Shuttle XPC slim DB860 is a professional-grade, ultra-compact solution engineered for the intersection of high-end productivity and advanced visual communication. Powered by the Intel Core Ultra 200 series (Arrow Lake-S) with an integrated Neural Processing Unit (NPU), it delivers up to 36 TOPS of AI performance. This makes it equally adept at accelerating local workstation workflows - such as data analysis and creative automation - as it is at powering intelligent signage solutions with real-time audience analytics and interactive content.

Designed for maximum visual impact and multitasking efficiency, the DB860 supports up to four independent displays, including stunning 8K@60Hz resolution via HDMI 2.1. Whether managing a complex financial trading desk, professional engineering projects, or high-fidelity video walls and interactive retail kiosks, this system provides the expansive screen real estate required for modern professional environments. Connectivity is enterprise-ready, featuring ultra-fast USB4 (20Gbps), dual Intel LAN (2.5GbE + 1GbE), and dual serial ports for seamless integration with both office peripherals and industrial hardware.

Combining mission-critical stability with a discreet 1.3-litre form factor, the DB860 is built for 24/7 operation in temperatures up to 50°C. Supporting up to 96GB of DDR5 memory and rapid PCIe Gen 5 storage, it offers a future-proof platform for healthcare, industrial automation, and premium retail signage. It is the definitive choice for those who refuse to compromise on power, reliability, and versatility.
