your data center with comprehensive protection A comprehensive, cyber-resilient architecture with security embedded into every server helps to protect your data. Protect server configuration and firmware from malicious changes with new Configuration Lock-down. Use system erase of local storage to help ensure data privacy when you repurpose or retire servers. Automate updates that check file dependencies and proper update sequence, before deploying them independently from the OS/hypervisor. Take control of your firmware consoles with embedded authentication that is designed to allow only properly signed updates to run.
