

NETGEAR RANGEMAX WIRELESS USB 2.0 ADAPTER 108 Mbit/s

Model: WPN111GE

Manufacturer: NETGEAR

Product Code: 15366

R397 R438

Optimised for use with the WPN824 RangeMax™ Wireless Router, which dramatically boosts signal and eliminates dead spots to provide superior wireless coverage and speed to your desktop PC or Laptop via the built-in USB port.

Up to 10x faster coverage and speed compared to 802.11g**

Compatible with existing 802.11b, 802.11g and Super G™ Wireless devices

Network range extended by up to 400 feet**

No need for range extenders, repeaters & external antennas

High-speed connectivity anywhere in your house or office

No more drop-outs, no more dead spots

** When used in conjunction with WPN824 Wireless Router

Wireless Connectivity - Range Matters

Staying wirelessly connected in your home or office can be tricky, especially as your environment continually changes. For example someone with a cordless phone might walk between your primary wireless signal and your computer or a microwave oven might click on. This interference can cause a drop in wireless data speed or drop out altogether.

The WPN824 RangeMax™ Wireless Router adjusts to interference and the physical barriers in your home to deliver up to 500,000 square feet of coverage. This means that with a WPN111 Wireless USB Adapter inserted, your computer or laptop will not be prone to loss of wireless speed or dropouts - ensuring continual high speed Internet and network access anywhere in your home or office.

New Technology - Smart MIMO

RangeMax™ is an advanced Smart MIMO (Multi-in, Multi-Out*) technology that uses seven internal antennas. The RangeMax™ WPN824 wireless router constantly surveys your home or office environment for physical barriers and interference: The RangeMax™ router adapts on the fly, adjusting the wireless signal to compensate for these performance blockers.

For example if you are sitting in your kitchen using your laptop with a WPN111 inserted, your partner turning on the microwave will not disrupt your wireless coverage, because the WPN824 will adapt to the change, using a different antenna configuration to strengthen the signal.

Security

By easily setting up WEP (Wired Equivalent Privacy) encryption or WPA-PSK (Wi-Fi Protected Access, Pre-Shared Key) security on your WPN824 router and WPN111 USB wireless adapter your computer or laptop will be well protected. These security features and the Firewall built into the WPN824 router add powerful safeguards against unauthorised usage.

Easy to Set-Up
