Product Code: 20648

R4,788

Standard USB 3.0 flash drives are fast. Flash Voyager GT USB 3.0 is even faster, with data transfer rates of up to two times the speed of standard USB 3.0 drives, and up to eight times the speed of USB 2.0 drives. The portability and convenience of USB drives has always meant putting up with delays while waiting for files to copy, but now they're a thing of the past.

The finger-friendly ergonomics of the Flash Voyager GT USB 3.0 will make you want to take it with you everywhere, so reliability is essential. Corsair's proprietary all-rubber housing is extremely durable, for worry-free transport of your valuable data. And because accidents happen, Flash Voyager GT USB 3.0 is water-resistant. Unlike traditional storage media, flash drives are solid-state, so they can easily handle the everyday - and not so everyday - drops and bumps that come with the territory.
