

HP 32A High Voltage Modular Power Distribution Unit

Model: 252663-B31

Manufacturer: HP

Product Code: 23080

R4,410 ~~R4,934~~

Is your data center lacking sufficient outlet receptacles or flexibility in rack space? Is cable management a problem?

HP Modular PDUs have a unique architecture designed specifically for data center customers who want to maximize power distribution and space efficiencies in the rack. Available in a small form factor with flexible mounting options, installation is quick and easy with all brackets, accessories and installation guides included. Modular PDUs consist of two building blocks the Core Unit (core) and the Extension Bar(s) (sticks). The Core Unit is 1U/0U, and the Extension Bars mount directly to the frame of the rack in multiple locations. Single phase models are available up to 40 amps and can have up to 28 outlets divided across 4 extension bars. Three phase models are core only units with 6 x C19 outlets that can be connected to optional extension bars or directly to components such as BladeSystems enclosures.
