The ThinkCentre M75n has a footprint similar to that of a 12oz soda can. Yet, this nano PC gives you desktop performance with AMD Ryzen™ PRO processors and business-critical security via ThinkShield. It provides essential connectivity, including USB-C, and standout energy efficiency. It's easy to deploy, manage, and use—whether at the office or at home. It's also portable and durable, giving you flexibility to work from anywhere.

Nano in size, not in performance

Only a third of the size of a 1L desktop, the ThinkCentre M75n is just as powerful—and 30% more energy-efficient. Fueled by up to AMD Ryzen™ 5 PRO processors, it delivers real-world performance to drive productivity, along with business-critical security and easy-to-use manageability.

With portability comes flexibility

Lighter than a basketball and the thickness of two smartphones back to back, the M75n doesn't compromise on connectivity nor performance. In fact, its portability means that it can be wherever there's a monitor—from a shared workspace to the kitchen table.

So many options

The M75n is incredibly versatile. As a grab-and-go PC, it's easily ferried from work to home and back again. Alternatively, it can be mounted anywhere—on a wall, behind a monitor, under a table*. It can also be hooked up to a dock or form part of a custom-build PC. The choice is yours.

*Compatible with VESA mounting and bracket accessories, sold separately.

And smart too

Thanks to the USB-C port, both data and power can be transferred at once, enabling a monitor to power the M75n rather than an adapter plug. And with Smart Power On, you can fire up the M75n via a keyboard without touching the on button—ideal for when the machine is housed in a hard-to-reach place.

Built to last

It has been military-grade tested for durability, ruggedness, and reliability. The M75n has also undergone more than 200 checks to ensure that it runs in extreme conditions and the harshest of places—from a hot, dry desert to the Arctic Circle.

Secure from the inside out

Behind every ThinkCentre, you'll find ThinkShield—multiple layers of data and device security. The M75n includes the Trusted Platform Module (TPM) to encrypt your critical data and passwords, Smart USB protection to thwart rogue USB use, and a Kensington lock slot to physically secure your nano PC.

For more information, including how to customize ThinkShield solutions to meet your business needs.

Specifications may vary depending upon region / model.
