the AI-driven fan control.

More Productivity. More Success.
Small in form, yet huge on productivity, the ThinkCentre M75s Gen 5 SFF carries the power of the AMD Ryzen™ PRO processor. With ample memory and storage, it’s built to multitask right from crunching numbers, and managing data, to editing and creating multimedia projects. Perform even better with superfast integrated AMD Radeon™ graphics.

A Slew of Security Features

Enjoy maximum security with ThinkShield — a combination of hardware and software solutions, including discrete Trusted Platform Module (dTPM) 2.0 to safeguard data, and BIOS-based Smart USB protection to prevent unauthorized access via peripherals. Also, keep physical theft at bay with chassis e-locks and the Kensington Nano Security Slot™.

Innovative Device Collaboration

While a host of ports and slots connects to multiple peripherals, the optional Smart Cable does so to different devices — even a laptop or tablet. It also helps to share computer control, data, and screen projection between systems. Moreover, the ThinkCentre M75s Gen 5 SFF is easy to deploy from both a software and hardware standpoint.

Durability Meets Reliability

We use the US Department of Defense's MIL-STD 810H to create a balance of reliability and durability for our devices. Meeting or exceeding 12 standards and 17 procedures, the M75s Gen 5 desktop PC is engineered to run in extreme conditions — harsh variables like Arctic wilderness, desert dust storms, extreme temps, pressure, humidity, vibration, and more.

Recycled Plastics & Energy-Saving Certifications

This device uses post-consumer content (PCC) — 85% recycled acrylonitrile butadiene styrene plastics plastics in the chassis. The packaging has 60% PCC, and 30% ocean-bound plastic in the thermal shell and bag, with a Forest Stewardship Council® (FSC) certified carton. Plus, ENERGY STAR® 8.0 and TCO 9.0 certifications minimize energy costs.
