Model: 4L41M24429

Manufacturer: LENOVO

Product Code: 288929

R1,383

Absolute Control™

Overview Adds capabilities on top of the Absolute Visibility bundle to allow you to control your Lenovo devices from anywhere. With Absolute Control you can take advantage of the always-on connection that exists to your Lenovo devices and in turn detect unauthorized device movement, remotely freeze at-risk devices, remote delete specific files or even wipe the entire hard drive, as well as enable firmware protection.

Why Absolute? Absolute's unique position in a Lenovo device's firmware ensures always-on connectivity and control. This helps you to take swift and appropriate actions when required in response to perceived device or security risks and to maintain compliance.

What is Absolute Control? Absolute Persistence™ technology is embedded in Lenovo devices. Once activated, this technology is fiercely resilient and is the only solution to survive attempts to disable it, even if the device is re-imaged, the hard drive is replaced, or the firmware is flashed. No other technology can do this. Leveraging this capability, Absolute Control enables you to extend beyond Absolute Visibility capabilities and now respond to endpoint risks with confidence.

Retain command of all your endpoints, all the time - even if they're off your network

- Safeguard your devices by freezing lost or stolen devices or setting geofences to monitor and alert whenever unauthorized device movement is detected.
- Ensure proper media sanitization as part of the device's lifecycle management or for at-risk devices by selectively wiping data from endpoints.
- Enable firmware protection withouth bringing in devices by remotely managing the supervisor password for supported Lenovo devices.
