APC AP9416 IT infrastructure software System management

Model: AP9416

Manufacturer: APC

Product Code: 289440

R280,292

Real-time enterprise level management tool, enabling IT Managers to monitor, configure, and assess their entire APC power infrastructure from a single console.

AP9416 Features

- Centralized Management Console

A single console outlines the status and health of APC devices on the network and enables you to monitor and configure the entire APC infrastructure.

- Proactive Notification

UPS alarms sent to network and server management systems can now trigger notification of power and UPS events which could threaten system and application availability.

- Exportable reports

Reports can be easily exported into Word, Excel, rtf, and Crystal Reports format, allowing customers to quickly and easily integrate reports into custom presentations or sort information for custom reports.

- Recommended Actions

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Providing descriptions of problems together with recommended actions reduces the need of training, eases deployment and speeds troubleshooting.

- Email/Pager Notification

Receive timely notification via an email or pager gateway of critical power and environmental events before they impact availability of critical loads.

- Centralized Event Logging

Events from networked APC UPSs are stored in the management system event log enabling root cause diagnosis and quick resolution of problems.

- Real-time monitoring

Immediate visibility to your entire physical infrastructure through centralized, real-time device monitoring and notification enabling quick assessment of events as they occur.

- Battery status reports

Help prevent problems and pinpoint additional runtime requirements.

- Downtime and On Battery Reports

Compatibility

- Web Browser

Microsoft Internet Explorer v6.0 or higher

- Compatible with Smart-Slot enabled UPSs

Compatible with all APC SmartSlot UPSs, including Smart-UPS and Symmetra units

Manageability

- Real-time monitoring

Immediate visibility to your entire physical infrastructure through centralized, real-time device monitoring and notification enabling quick assessment of events as they occur.

- Recommended Actions

Providing descriptions of problems together with recommended actions reduces the need of training, eases deployment and speeds troubleshooting.

- Battery status reports

Help prevent problems and pinpoint additional runtime requirements.

- E-mail notification

Configurable email notification of UPS and Power alarms which could affect network availability. Pager notification via email gateway.

- Exportable reports

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
