

APC SFTWES1005Y-DIGI software license/upgrade 1 license(s) 5 year(s)

Model: SFTWES1005Y-DIGI

Manufacturer: APC

Product Code: 289838

R385,224

A cloud-based, vendor agnostic, secure solution that enables wherever-you-go monitoring and visibility into your IT physical infrastructure

Extendable architecture

Available node and application license keys extend the capabilities of the platform allowing it to grow to meet changing business needs.

Remote monitoring support

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Web-based service that serves as a second set of eyes into the health of a company's physical infrastructure. Experienced professionals work non-stop to provide 24-hour monitoring and to help diagnose problems before they become critical.

Encrypted communications

2048 bit RSA certificate and data is encrypted in transit using 256 bit AES encryption. EcoStruxure IT Gateway uses an outbound connection through Port 443, and only communicates to EcoStruxure IT cloud using 40.84.62.190 and 23.99.90.28.

Event Notifications

Receive real-time event notifications that minimize response times to critical physical infrastructure situations, reduce mean time to repair, improve efficiency, and maximize uptime.

Unified console

Customizable Windows and Linux client application enables instant access from any browser or mobile device

Alarm Consolidation

Reduces erroneous alarms and decreases MTTR by detecting the root cause in minutes.

Cloud-based monitoring

Maintain uptime for local edge and distributed environments and check the status of your physical infrastructure equipment from a centralized view, ensuring peace of mind whether onsite or remote.

Centralized Inventory Management

Obtain Immediate and detailed visibility of all physical infrastructure devices by geography or customizable location.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Multi-vendor device support

Extensive multi-vendor support for monitoring networked SNMP, MODBUS and Redfish devices. Enables visibility of devices through threshold alert notifications, data trending and reporting.

Assessment

Determine patterns of healthy behavior and provide a scorecard using analytics and machine learning to identify which devices require attention.

Benchmarking

Compare your devices performance against the total population of similar devices in the industry.

Auto-discovery

Reduces the time needed to install and deploy physical infrastructure devices by automatically detecting manageable devices on your network.

Automatic updates and backups

Updates and backups are automatically applied to always provide the most current solution.

Private networking

Reduce IP addresses needed on the public network to manage devices, by placing them on an isolated secure network.

Graphical trending analysis

Access current and historic data for any device or group of devices. Plot and graph multiple data points in a logical correlation to visualize potential hazardous trends.

Custom reporting

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
