

APC InfraStruXure Capacity, 1 Year Software Maintenance Contract, 200 Racks 1 year(s)

Model: WCAM1YR200

Manufacturer: APC

Product Code: 290052

R204,634

Provides 24x7 telephone technical support and software updates available during the term of the contract for all license keys covered by a software support contract.

Includes: 1 Year contract

- Service warranty certificate

Customers receive assistance from the Service Entitlements team to ensure their product is properly recorded. An e-mail Service Entitlement Certificate provides a detailed record of the service registration, along with the service expiration date.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

- Software upgrades

Software support contracts entitle customers to all software upgrades and updates, ensuring access to new features and product enhancements.

- 7x24 telephone technical support

Our experienced technical support engineers are available to answer your questions, giving you peace of mind knowing the help you need is there when you need it.

Planning

- Physical equipment planning

Quickly locate the optimum spot for that next server based on physical infrastructure needs.

- Business impact

Shows the consequence of device failure on rack-based equipment for instant identification of critical business application impacts.

- Simulation of device failures

Enables data center operators to proactively identify how a device failure will impact business critical applications.

- 3-phase load balancing

Automatically distribute and track single and three-phase equipment power draw, ensuring all three phases on the power system carry a balanced load.

- Power dependency path

Map the power path and physical system relationships and dependencies.

- Airflow analysis

Simulate any cooling scenario in your data center, instantly visualizing the cooling effect on your infrastructure.

- Capacity reports

Shows planned and actual power data in one view, enabling detailed planning of future power needs.

- Floor and rack load weighting

Factors floor and rack weight limits when placing new equipment

- Port count

Recommends best location to install new IT equipment based on power and network port availability

Availability

- Available Capacity

Understand available capacity by calculating actual space, power and cooling consumption, power

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

shop.cssi.co.za | sales@cssi.co.za | +27 (11)541-9950

and network port availability and floor and rack weight limits against data center architecture constraints.

- Measured power data

Prevent overloads through graphical display of average and peak power usage by measuring actual consumption through metered rack PDUs.

- Keyword tagging

Highlight location constraints through keyword tagging of data center racks or equipment.

- U-space report

Provides a quick overview of available U-space within your data center.

- Capacity policies

Group IT equipment to match availability needs and avoid stranded space, power and cooling capacity.

- Electrical room support

Monitor capacity and plan changes for centralized power equipment in areas outside of the main data center floor plan.

Manageability

- Equipment browser

Quickly locate equipment based on vendor name, model and type, and export equipment data to excel format.

- Device catalog

Utilize the extensive library of physical infrastructure and IT devices from leading vendors.

- Custom devices

Quickly customize catalog devices to your specifications in just 2 clicks, amending custom properties such as power requirements and MAC address etc.

- Free text search

Quickly locate devices and alerts through the free search field.

- Generic UPS support

Allows for modeling data from any UPS vendor, providing support for existing data center environments.

Agility

- Model any data center

Capable of modeling data centers and rooms with rows in any direction.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

- Common data model

Ensure mature and synchronized data throughout the entire data center life cycle.

- Optional deployment services

Ensure speedy deployment through the use of APC Professional Services.

- Localization

User interface available in major local languages.

- Integrates with InfraStruXure Management applications

Achieve integrated energy efficiency, predictive planning and real-time data center operations through the add-on InfraStruXure Management applications; InfraStruXure Operations, InfraStruXure Capacity, InfraStruXure Change, InfraStruXure Energy Efficiency, InfraStruXure Energy Cost & InfraStruXure Mobile.

Protection

- User roles

Enable different levels of access through multi-user login and pre-defined user roles.

- Multi-user access

Enables several users to carry out work on the application simultaneously.

- Password Security

User-selectable password protection prevents unauthorized access.

- Read-only Access

Share access without risking unauthorized configuration changes.
