Look no further for a memory that combines performance and beauty for building a stylish, modern PC!

Each memory kit contains specially screened ICs through G.SKILL’s unparalleled selection process and a custom engineered ten-layer PCB offering maximum signal stability; and every single kit is rigorously tested for reliability, compatibility, and performance across a wide range of motherboards.

Create a one of a kind PC with the Trident Z RGB memory kit! The best thing about having RGB capabilities is the ability to choose the colors you want. Whether it's white on one day or green on the next, you can be sure these modules will look current and modern in any build.
