Huion Inspiroy 2 S graphics tablet

The HUION Inspiroy 2S is a graphics tablet designed with the user's comfort in mind - whether a beginner or a more advanced user. It has gained new, better-feeling buttons, which, thanks to their clear separation from the work surface (they are 2 mm higher) and special tabs, allow easier operation without looking. In addition, it is equipped with a practical Scroller slider - it works similarly to the roller in a mouse, and its sensitivity can be adjusted in the software. It is simply a convenient and intuitive tool for working and drawing.

New stylus, more comfort

A new, thinner PW110 stylus is included - battery-free, with EMR technology. It has an extended silicone grip, and the clever positioning of the buttons prevents accidental pressing while drawing. This makes longer work more comfortable and the hand less tired. The stylus offers up to 8192 levels of pressure sensitivity and great precision, and there's also an ergonomic stylus holder

included - everything you need for stable drawing.

Drawing like on real paper

The tablet's working surface has been noticeably improved over previous models - the panel's friction has been increased by 20%, so drawing resembles working on paper. The matte texture and eye-pleasing colors make it easier to focus on your work, even during long creative sessions.

Draw wherever you want - including on a smartphone

Inspiroy 2S works not only with computers - it also works seamlessly with Android and HarmonyOS phones and tablets. This means you can connect your tablet directly to your mobile device and draw anywhere. In addition, the compact size and low weight make it easy to store and transport.

Tailored for right- and left-handed users

HUION has made sure that the tablet is convenient for everyone. The USB-C port is placed on the left side, and the layout of the buttons and slider is symmetrical. So you can easily rotate the device 180° and adjust it to your dominant hand in the settings. It also supports 90° rotation, which will be appreciated by those who use monitors in portrait orientation.
