More detail and depth on the screen

The Kamvas 12 features an 11.6-inch IPS screen with a resolution of 1920 × 1080 (Full HD). It's a compact format, but one that offers surprisingly high display precision. Thanks to full lamination, the screen provides a clear, realistic image with minimal parallax effect, and the anti-glare (AG) glass used nullifies light reflections, ensuring comfort even in bright light. Colors are vivid and well reproduced - not only in the preview, but also in the final result of the work.

Colors that impress

The tablet undergoes a color calibration process at the factory, which guarantees accurate color reproduction right out of the box. With 120% coverage of the sRGB gamut and support for 16.7 million colors (8-bit), the screen displays natural tonal transitions, intense colors and subtle shadows. This translates into greater precision when designing graphics, illustrating, retouching photos or creating animations.

Precision stylus

Included is the PW517 stylus, which uses PenTech 3.0 technology for even faster response times and greater precision. The stylus doesn't require charging or batteries, which means it's always ready to go. The 8192 pressure levels and support for tilt up to ±60° allow you to freely draw, shade and work in a variety of styles - as if you were using a pencil, brush or marker. In addition, the buttons on the stylus can be programmed, for example, to quickly switch between brush and eraser.

Tailored to your habits

Kamvas 12 is equipped with 8 programmable buttons that you assign to your most frequently used functions, such as undo, change tools or zoom in on the canvas. This allows you to work faster and more intuitively, without having to constantly reach for the mouse or keyboard.

Work as you are comfortable

Kamvas 12 gives you more than just a screen - at any time you can switch to graphics tablet mode and work with the screen off, saving energy and relieving eye strain. Simply unplug and plug the
