Colors that reflect reality

Kamvas 24 covers 120% of the sRGB color space, which, combined with a color depth of 16.7 million (8-bit) and a contrast ratio of 1000:1, produces vivid, natural and accurate colors. As a result, you can be sure that your projects will look great not only on screen, but also in print or online publication.

Clear images from any angle

With a 178° viewing angle, the screen maintains color consistency and sharpness no matter from which side you look. This is ideal if you frequently change position while working or collaborate with others at the same screen.

Realistic drawing experience

The screen surface has been coated with a matte anti-glare coating that effectively reduces reflections and gives the surface a soft paper-like texture. This makes each pen stroke more natural, and makes drawing comfortable and enjoyable - even during long hours of sessions.

A stylus that follows your every move

The included PW517 stylus works without batteries and is based on PenTech 3.0 technology, which ensures exceptional stability and natural movement. It supports up to 8192 pressure levels, tilt up to ±60°, and its sensitivity and responsiveness (>220 PPS, 5080 LPI) make every stroke smooth, precise and exactly as you intended. A silicone grip and two side buttons increase comfort and efficiency.

Flexible connections without limits

Kamvas 24 is equipped with two USB-C ports - one for connection via a 3-in-1 (HDMI) cable, the other for direct USB-C to USB-C connection to a computer, laptop or compatible Android mobile device. In addition, a USB-A port allows you to connect a keyboard, flash drive or other accessories.
