esports-pro-approved design. What you wield is not just an accessory, but a work of art, meant to help you evolve into the legend you are meant to be.

A Carbon Fiber Shell

Carbon fiber is extensively applied in aerospace, automotive, and sporting industries due to its remarkable weight-to-strength ratio. Shaping the top shell of the Harpe Ace Extreme completely out of carbon fiber has allowed us to achieve 47-gram lightweight without compromising the pro-tested shape and feel by perforating the structure.

Strongest of Them All

When compared with other materials used in premium mice, carbon fiber is able to withstand the most force without any signs of damage

Artisan-Level Precision

Molding carbon fiber into the beloved shape of the Harpe Ace is no easy task. Each Harpe Ace Extreme shell goes through a rigorous eight-stage manufacturing process to ensure that the finished product adheres to exacting ROG standards.

Attention to Every Detail

We are intentional in the way we select, cut and position every piece of carbon fiber material to ensure that the weave patterns on every shell match up at the most aesthetically pleasing angles, with a tiny dash of uniqueness.
This level of care extends to the left and right buttons as well, which are cut out from separate pieces of carbon fiber – a redesign to ensure that the Harpe Ace Extreme retains the same tactile click feel of the original.

Precision Like No Other

ROG Polling Rate Booster

Experience optimal wireless responsiveness and consistency at up to 8000 Hz wireless report rate. Connect the accessory any way that best fits your set up to tap into that extra boost in performance.

ROG SpeedNova Wireless Technology

Extremely fast, reliable, and power-efficient. Paired with the ROG Polling Rate Booster, experience ultra-low click latency.

ROG Omni Receiver

Allows wireless connection to one keyboard and one mouse with a single USB dongle.

Corning® Gorilla® Glass Mouse Feet

These glass skates are ideal for cloth mouse pad users aiming for smoother, more effortless movements while maintaining superior control with better force adjustment and stopping power.

Armoury Crate Gear

You can adjust performance and surface calibration settings, program and map buttons, or adjust RGB lighting with the Armoury Crate Gear software, made exclusively for the ROG Harpe Ace Extreme.

Armoury Crate & Aura Sync

For synchronized lighting across other Aura Sync products, install the original Armoury Crate software; then access an endless spectrum of colors, preset effects and wallpapers to take your setup to the next level.
*Works with Windows Dynamic Lighting
