audio. 24-bit 96 kHz audio*, Dirac Opteo™, and Adaptive ANC with Auto mode combine to immerse you in high-resolution audio, while Bone-Conduction AI Microphones ensure superior call quality. And with up to 46 hours** of battery life, ROG Cetra True Wireless SpeedNova keeps the audio going all day long.

*In 2.4 GHz mode
**In Bluetooth mode

DUAL-MODE WIRELESS CONNECTIONS

You can enjoy unrivaled flexibility with Bluetooth and ultra-low latency 2.4 GHz connections.

ROG SPEEDNOVA WIRELESS TECHNOLOGY

Together with the USB-C dongle, ROG SpeedNova wireless technology optimizes the 2.4 GHz band to deliver ultra-low latency audio performance and a robust connection. It’s also more energy efficient, providing up to 36 hours of battery life* for marathon gaming.

REALISTIC AUDIO

ROG Cetra True Wireless SpeedNova takes advantage of the LC3+ codec to deliver high-resolution 24-bit 96 kHz audio*. Additionally, Dirac Opteo™ offers rich details and accurate sound staging for true-to-life listening experiences.

BONE-CONDUCTION AI MICROPHONES

The absence of a boom mic makes clean and clear voice pickup a challenge for earbuds.
The bone-conduction sensors of ROG Cetra True Wireless SpeedNova capture voice from vibrations of the bones in the wearer’s skull.
Together with the AI Noise-Canceling beamforming microphones, they effectively reduce background noise while maintaining natural sound to ensure crystal-clear calls.
