DXT 2 Precision Mouse

With the DXT Precision Mouse, you can work on your computer with the utmost precision.

Precision grip for precise navigation.
Precision grip for precise navigation. You hold the DXT Precision Mouse with your fingertips, like a pen. This grip is similar to how you write. This means that you can do your mouse work with small and precise movements. Thanks to the familiar pen grip, the DXT Precision Mouse promises fast familiarisation. With the selectable pointer speed at the bottom of the mouse, you can choose between four different levels.

- A higher speed (higher DPI) is recommended for general mouse use;
- A slower speed (lower DPI) is recommended for slower, more precise work, such as drawing or photo editing.

Universally applicable.

The DXT Precision mouse is equally suitable for right and left-handed use. Thanks to the unique button on the inside, you can continuously choose between left and right and rotate the DXT Precision mouse 180°. This gives you the flexibility to use the mouse alternately with both hands.

- What's more, because this mouse is held by the finger tips, this compact mouse model is suitable for both larger and smaller hands.

Ergonomic hand position.

The DXT Precision mouse has the special feature of being held by the finger tips. This allows the mouse hand to remain in an ergonomically natural and neutral position at all times. Thanks to the pen grip, mouse work can be performed with small movements without straining the shoulder. The simultaneous vertical position of the wrist relieves the forearm and prevents discomfort. From now on, use your energy for more performance at work.
