

Zyxel EX3501-T0 wireless router Gigabit Ethernet Dual-band (2.4 GHz / 5 GHz) White

Model: EX3501-T0-EU01V2F

Manufacturer: ZYXEL

EAN: 4718937634767

Product Code: 413788

R2,852

Home office, gaming, and streaming compete for bandwidth, causing latency and buffering. The Zyxel EX3501/3500-T0 Series Dual-Band Wireless AX3000 Gigabit Ethernet IAD/Gateway, featuring Wi-Fi 6 (11ax) and Zyxel MPro Mesh® Solutions, optimizes bandwidth for superior connectivity and low latency. It is ideal for copper deployments and offers a budget-friendly transition to Wi-Fi 6 and Gigabit speeds.

Flexible and affordable Wi-Fi 6 with 160 MHz bandwidth

Say goodbye to buffering and hello to uninterrupted streaming, gaming, and browsing. The Series has advanced technology to ensure reliable connectivity with unmatched speed to your customers' devices.

MPro Mesh® kills the dead zones

Featuring EasyMesh fully compliant Zyxel MPro Mesh® Solutions, service providers can integrate with the Series to enhance your subscribers’ experience by providing self-adapting, easy-to-manage whole-home Wi-Fi coverage, while reducing your service OPEX.

Remote management that reduces OPEX

Deploying a service technician is costly and time-consuming. Now you can configure, monitor, and troubleshoot devices without the expense of sending a service technician onsite.

Compliant with TR-069/TR-369 standard, the Series significantly simplifies deployment complexity and lowers operating and maintenance costs with its built-in remote management capabilities to reduce service time and stay ahead of the competition.

Superior flexibility and faster time-to-market with Zyxel OPAL firmware

The Series is available with Zyxel OPAL – our mature, modular software platform. The software incorporates a set of field-proven applications and allows you to easily manage your customer’s premium services or seamlessly migrate and upgrade them to new technology – all with the advantage of reduced development time for you and great service for your customers.

You decide the QoS

Based on your service offerings to customers - you can freely define the QoS policies and prioritize mission-critical traffic such as Voice. Defining the QoS will improve your customer’s network efficiency and give them the super-fast multi-play service quality they want.
