Fujitsu Windows Server 2019 CAL Client Access License (CAL) 10 license(s)

Model: S26361-F2567-L665

Manufacturer: FSAS

EAN: 4063872053174

Product Code: 524115

R11,131

Build your future with Windows Server 2019

Windows Server 2019, the latest Windows Server OS, is a much anticipated successor to the fastest-adopted, best-selling Windows Server 2016. Windows Server 2019 significantly enhances its functionalities in the four of the most important areas of modern cloud-driven computing: hybridization, hyper-converged infrastructure, security, and application platform. Incorporating user feedback on Windows Server 2016, Windows Server 2019 greatly improves its popular features, the extended scalability of Storage Spaces Direct (S2D) for hyperconverged infrastructure being but an example. Windows Admin Center, an evolution of Windows Server inbox management tools, makes it a breeze to marshal Windows Server 2019’s wide-ranging capabilities.

Hybrid

Windows Admin Center can manage multiple Windows OSs (Servers/Clients). Fujitsu provides the extension for Windows Admin Center which manages and monitors the important hardware components. Fujitsu Extension helps bridge hardware and software together in one console and helps administrator management across the entire system.

Hyperconverged Infrastructure (HCI)

- Storage Spaces Direct (S2D)’s storage-pool size per cluster raised to an astonishing 4 petabytes!
- Improvements in such popular S2D functionalities as performance history, latency-based marginal drive detection, and mirror-accelerated parity.
- Hyper-V now supports persistent memory (PMEM), and Fujitsu PRIMERGY servers in the future, too, will support PMEM. experience

Security

- Shielded VM now supports Linux OSs.
- Shielded VM’s Host Guardian Services (HGS), maintaining coordination among multiple servers, make it possible for VMs to keep operating even when one or several servers fail.
- Windows Defender Exploit Guard locks down devices against a wide variety of attack vectors and blocks behaviors commonly used in malware attacks.

Application Platform

- Significant reduction in container images and compatibility improvement for Kubernetes (i.e. management tools for Linux Docker).
- Windows Subsystem for Linux for Linux developers.
