Model: NSG-2307

Manufacturer: GENESIS

EAN: 5901969449242

Product Code: 607269

R1,345

The Neon 613 G2 is a wired headphone designed for gamers who prefer solidly built gaming accessories, good sound quality and optional RGB backlighting. The V-type sound favors bass and treble tones, but we've paid attention to keeping the boost soft and wide. As a result, the Neon 613 G2 won't obscure bass sounds important for virtual gameplay - such as footsteps, reloading weapons or using special abilities. So it's a great choice for gamers who like to compete.

HIGH QUALITY SOUND

Neon 613 G2 are equipped with high-quality 50 mm drivers, offering a wide frequency response of 20 - 20,000 Hz. We have also significantly improved the sound details compared to the previous version, so the headphones will be a great choice not only for gamers who will hear every move of the enemy lurking in hiding, but also for lovers of listening to good music. Use them as you like.

ELEGANT BACKLIGHTING

The Neon 613 G2 headphones will also appeal to lovers of minimalist design, for whom most models on the market feature overly intense and striking RGB backlighting. Instead, the Neon 613 G2 features a subtle illuminated circle of the shell's perimeter, which blends perfectly with the colors of the rest of the headphones: anthracite and snow white. Both match the color standard of our other products. The sleek design will match any computer setup.

FREE COMMUNICATION

Communication is one of the most essential elements of team performance - both at work and during intense gaming. A condenser microphone with a frequency response of 10 to 10,000 Hz will allow you to clearly and precisely inform your team members about the current situation, not only on the battlefield. Whether working or playing - excellent communication will help you succeed.
COMFORTABLE EARMUFFS
We know how important is also the comfort of the headphones during long hours of sessions in front of the computer. Neon 613 G2 offer comfort throughout even the longest games - this is thanks to the flexible headband, which will adapt to the shape of your head, and the large hybrid (in part textile) pads, which will provide you with adequate airflow to the ear even on hot days providing protection against excessive perspiration. The use of this material is also a guarantee of durability, without the drawbacks of "peeling" eco leather.

SOUND AND LIGHT CONTROL

At GENESIS, we believe that the complete comfort of your headphones is more than just the convenience of wearing them. It's also about the convenience of their options, so if you need to, you can instantly turn off the LED backlight or microphone via handy switches located on the cable. On the other hand, you'll change the volume of the headphones with a knob on one of the earcups.

CONNECT TO A WORLD OF GOOD SOUND

You will use the headphones by connecting them to your computer via a 2.2m cable (you will also find a special splitter in the set). This is enough to use the Neon 613 G2 with full freedom - without worrying that you will disconnect the device from your PC, console or other equipment with too sudden a head movement. It's worth remembering that turning on the backlight requires connecting headphones via USB.
