Tap into extreme overclocking potential

DDR5 ushers in a whole new era of memory technology to make extreme overclocking a more stable option than previous generations. On-die ECC delivers more reliable DRAM components, an on-board PMIC balances power when and where it’s needed, and two independent 32-bit subchannels provide dramatic increases in data efficiency for multi-core processors.

Intel® XMP 3.0 certified

Intel Extreme Memory Profile technology makes overclocking a breeze with advanced pre-optimised factory timings, speeds and voltages for overclocking performance. Kingston FURY Renegade DDR5 features a programmable PMIC for XMP 3.0, supporting up to two customisable profiles to optimise your own unique timings, speeds and voltages saved directly to the DIMM.
