

D-Link Nuclias Connect Network Controller

Model: DNH-1000

Manufacturer: D-LINK

EAN: 790069479373

Product Code: 614113

R5,885

Centralized Device Management

Enables centralized device management, automated configurations, and simultaneous firmware updates for efficient network operations.

Role Based Administration

Allows network administrators to assign role-based access levels and permissions while enabling localized control for specific network segments.

Online Firmware Upgrade

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Enables remote firmware upgrades, ensuring the latest features, security patches, and performance improvements without manual intervention.

Traffic Reporting and Analytics

Provides advanced traffic analytics, real-time insights, and customizable reports for optimized network performance.

Advanced VLAN Segmentation and Access Policies

Enhances network security and efficiency with VLAN access control, enabling administrators to segment networks, prioritize traffic, and enforce tailored policies.

Auto RF & Bandwidth Optimization

Optimizes wireless performance with Auto RF and Bandwidth Optimization, ensuring optimal connectivity and minimal interference.

Multi-SSID and Captive Portal Authentication

Supports Multi-SSID and Captive Portal, allowing separate networks for user groups with secure, customizable login options for guests and employees.

Real-Time Monitoring and Alerts

Monitor real-time network status, generate reports, and receive instant alerts from a centralized dashboard.

Centralized Management for APs and Switches

The Nuclias Network Controller centrally manages up to 500 devices via a unified interface. It enables configuration of SSID, VLAN, RF, and firmware updates to reduce downtime and manual effort. With role-based access and compatibility with Nuclias APs and switches, it ensures secure, scalable, and efficient network operations.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Batch Configuration for Streamlined Network Management

Effortlessly apply settings, updates, and security policies across multiple APs and switches, reducing manual effort and ensuring consistency. Automate SSID, VLAN, RF optimization, scheduling, and wireless resource allocation to optimize network performance, while streamlining IPv4 ACL, access policies, port settings, and SNTP configurations for enhanced security and reliability.

Auto RF for Stable Connectivity

Enhances wireless performance with Auto RF Management, which dynamically adjusts channel and power levels based on real-time interference and traffic conditions to reduce signal interference and maintain stable connectivity. Bandwidth Optimization enables efficient allocation of bandwidth across devices to ensure optimal connectivity.

Real-Time Monitoring for Smarter Network Management

Get complete network visibility with real-time monitoring of APs and switches. Instantly view client counts, traffic, channel use, PoE status, and event logs. Monitor signal quality, client data, and switch activity — including IP, MAC, VLAN, port info, and PoE usage — with built-in tools for port control and VLAN settings. Traffic and performance reports reveal peak usage, top APs, PoE consumption, and error trends. Comprehensive logs and real-time alerts ensure security and system stability.

Deployment & Monitoring with the Nuclias Connect App

Effortlessly deploy and monitor your network with the Nuclias Connect app. Simplify device setup, track real-time performance—all from the convenience of your mobile device.
