

HP 8-GB PC3-12800 (DDR3-1600 MHz) SODIMM Memory

Model: B4U40AA

Manufacturer: HP INC.

EAN: 886112920456

Product Code: 81375

R1,940

Maximize your business PC performance with HP Memory. Upgrading your memory is a cost-effective way to boost your system performance without having to upgrade your processor.

- Dual channel configuration - HP Desktops feature motherboards designed with two memory channels instead of a single channel.
- Reduce system latencies and significantly improve your system performance with dual channel memory configurations* by utilizing the theoretical bandwidth of two memory modules instead of one.
- Expect fast start-up times with reduced delays during routine operations and system maintenance functions. Meet everyday workloads head on, and run more programs simultaneously. Easily toggle back and forth between several open applications with noticeable speed.
- Your performance is our business. Each HP Memory model undergoes a rigorous supplier

qualification processes for ensured quality and reliability in a variety of networked environments.
- Dual Channel memory configuration requires the population of symmetric memory in each of the two memory channels (i.e. 2x256).
