Prevents buffer under run error and enables high speed writing

- Buffer Under Run occurs in high speed writing, when speed is faster than data transfer speed.
- Buffer Under Run Technology prevent the Buffer Under Run Error and it enables Multitasking on the PC.
- Supports high speed writing even in low performance PC.

Double OPC (Optimum Power Control) in DVD+R

- Usually the outer side of the disc has lower writing quality because of the vibration and swaying of the disc makes the servo signal worse
- Double OPC technology enables to check not only in the inner but also in the outer side of the disc, optimizing the laser power on each area in order to perform the most reliable writing.
