Beamforming detects the direction of connected devices and forms a focused signal towards them to improve coverage.

Easier Combos in Games

MU-MIMO technology transmits data for multiple devices at the same time, reducing latency and improving your chances of winning.

Multi-Mode: Create or Boost a Wi-Fi

Wi-Fi Router

Share available Internet access from DSL or cable modem to multiple users, wired or wireless.

Access Point

Turns wired connection into wireless. Usually, it is behind a router and doesn't has a DHCP server.

Wi-Fi Extender

Share available Internet access from DSL or cable modem to multiple users, wired or wireless.

WISP

WISP connects existing Wi-Fi and creates a subnet for connected devices, making it safer than extender mode.

Easy Setup. Versatile Features.

Guest Network and SPI Firewall

Protects your privacy by setting up separate guest networks. SPI firewall shields you from network spoofing and DoS attacks.

VPN Server and Client

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
shop.cssi.co.za | sales@cssi.co.za | +27 (11)541-9950

Enables remote working with VPN server and remote networks secure access with VPN client. PPTP/L2TP protocols are supported.

Network Status Panel

Finish setup in minutes and know the system status at a glance with the status panel.

Per-Devcie Wi-Fi Schedule

Manage your kids' online activities by setting an online time duration for selected devices.
