Six popular protocols encrypt the data tunnel in the way you prefer, either when connecting as a client or hosting a VPN server.

## Compatible with 50+ Providers

Built-in WireGuard and OpenVPN VPNs allow you to share your commercial VPN with all connected devices.

## Assign VPN to Specific Devices

Out of the security or performance concerns, you can choose specific devices to use the VPN in the device management panel.

## No Public IP? No Problem

Hosting a VPN server usually requires a public IP. ZeroTier enables you to host a server even if you do not have a public IP in hotels or cafes.

**DNS over TLS Protects Browsing Data from Leaking**

## Without DNS over TLS

Hosting a VPN server usually requires a public IP. ZeroTier enables you to host a server even if you do not have a public IP in hotels or cafes.

## With DNS over TLS

Your website lookup requests will be encrypted and handled by trusted DNS providers including Cloudflare, Google, and Quad9. The Quad9 has made no-logging claims, so literally, no one can know which websites you have visited.

## A Protection Layer Between Your Data and Public Wi-Fi

Choose the router or WISP mode to improve security when you connect to public Ethernet or Wi-Fi correspondingly. It also carries AP/RE/Client modes, plus support for Cudy Mesh, for various

scenarios.

**Pocket-Sized Mighty Functions**

## Lighter, Smaller than Phones

Weighing only 99.9 g (3.52 oz.) with a pocket-size, TR1200 is a travel-friendly network companion.

## Power with your Laptop

Power it with your laptop or phone charger through the USB-C Power Jack. The third-party power supply needs to be 5V / 2A or equipping PD.

**Click! Your VPN is On.**

A configurable switch allows you to quickly toggle the VPN, without needing to enter the config page.

## Host Your Own NAS

Plug in your drive to host your own cloud station with Samba protocol. Third-party software "X-plore" is required for Android systems.
