

GENESIS Neon 764 Headset Wired Head-band Gaming USB Type-A Black

Model: NSG-2169

Manufacturer: GENESIS

EAN: 5901969444506

Product Code: 974692

R1,417

Take control of your sound with GENESIS Neon 764, a headset that offers not only a good quality sound chip integrated into the controller, but also an advanced equalizer that, combined with sound profiles and virtual 7.1 sound, will allow you to use the maximum potential of the headphones in any application. Comfort? You don't have to worry about it anymore. Play for hours, configure and have the most important functions always at your fingertips. This is the GENESIS Neon 764.

HEAR EVEN MORE

Using an integrated sound card? Take it to the next level with GENESIS Neon 764 and you'll hear more. That's thanks to both the 50-millimetre drivers and the controller's dedicated, built-in chip that supports high-resolution audio (24-bit/96kHz). Higher quality means you'll benefit from greater detail and therefore efficiency in dynamic action games. And if you need more surround sound, you can easily achieve it by activating virtual 7.1 sound - it's really easy.

SOUND JUST THE WAY YOU LIKE IT

A good quality soundcard is one thing. Alongside it, the GENESIS Neon 764 will let you customise the sound yourself. All you need to do is use the built-in profiles we've created for specific applications. Want to locate opponents more efficiently in FPS games? The ‘Scout’ preset emphasises footstep sounds. Are you focused on action and prefer to enjoy every explosion? ‘Explosion’ is perfect for this. Or simply relax to the sounds of your favourite band. The ‘Music’ setting will give you the best experience. What's more, thanks to the extensive equalizer, you can easily create your own sound, which you save in the selected profile.

ESSENTIAL FUNCTIONS ALWAYS AT HAND

We know how important it is for gamers to use additional functions. That's why we've packed a small, in-line controller with features that keep the most important ones close at hand. Adjust the backlighting of the ear cups, adjust the volume, turn the microphone on and off, switch between available sound profiles, all in just a moment.

EVEN MORE COMFORT

So comfortable you may forget you have them on your head. GENES Neon 764 features proven solutions and materials to make hours of gaming even more enjoyable. Large and soft earcups, pleasant-to-touch fabric placed on the inner side of the headband and stepped adjustment. Comfortable and durable - these are the GENESIS Neon 764.

ILLUMINATE YOUR POSITION

GENESIS Neon 764 is a set that no one will pass by indifferently. All thanks to the fully customisable RGB backlighting of the shells. You can easily choose its effect and colour from the palette available

in the control app. And if you don't want to be distracted by anything during gameplay, simply deactivate it with a single click.

NOT ONLY THE SOUND

GENESIS Neon 764's dedicated software provides not only the ability to edit sound or activate virtual 7.1 sound, but also manages microphone settings - including automatic gain control (AGC) or ambient noise reduction (ENC). Make yourself heard and communicate freely with GENESIS Neon 764.
