The Turtle Beach® VelocityOne™ Flightstick for Xbox Series X|S, Xbox One & Windows 10 & 11 PCs equips you with immersive, accurate controls for navigating air and space flight simulation & combat games on Xbox and PC. High resolution non-contact sensors provide precise response and extended longevity to the main stick controls, while throttle and flap levers control main engine power and make for quick adjustment of secondary control surfaces. Plus, the levers can be customized with swappable throttle heads to suit the aircraft you are flying. Precision detents at the minimum and maximum positions allow activation of full reverse thrust at minimum, and afterburner, boost or Take Off/Go Around thrust at maximum. An ultra-precise nano trim wheel allows for fine tuning of attitude, and an analog POV hat allows freelook in cockpit views or strafe thrusters in space simulation games. An OLED Flight Management Display makes for easy adjustments to control profiles, trim wheel input mode, rudder lock and more. Navigate the FMD using an intuitive rotary dial with click at the base of the stick to configure, and update product performance in real-time with all information stored in on-board memory. 27 programmable buttons, including an 8-way digital POV hat, rapid fire trigger, stick mounted buttons, dual throttle lever detents and 8 programmable base buttons equip you with an arsenal of adjustable controls to your most critical simulation functions. Pilot fighter jets or airliners thanks to an ambidextrous right and left-handed design with a reversible wrist rest, and programmable base buttons allow the entire setup to be configured for right, or left-handed controls. Take customization a step further and adjust the color, brightness and response of multiple RGB LED zones. Familiar Xbox controls allow for easy console operation, and you can switch input mode to PC to play across a wide range of simulation titles. Plus, the Flightstick can be used alongside the Turtle Beach VelocityOne Rudder Pedals on PC and Xbox*, for an even more immersive flight experience.
